                                                                                                                                                                       *tag= n
note= "First exon according to the published form of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an isolated human FOXC2 promoter region. The mammalian FOXC2 promoter region for the modulation of FOXC2 polypeptide expression has therapeutic value in treating type II diabetes mellitus, obseity, hypercholesterolaemia, other cardiovascular diseases or dyslipidaemias. This sequence encodes the human transcription factor FOXC2, the promoter of which is described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     promoter region that modulates the expression of a is useful for treating obesity and type II diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also cincluded is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (BST) for inforensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, or chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is useful for part of the printed specification, but was for this patent did not form part of the printed specification, but was obtained in electronic formet directly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotide sequences obtained from various cDNA libraries, useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  identifying at least one gene involved in plant resistance or response to pathogenic infection for conferring resistance or tolerance to a plant to bacterial, fungal or viral infection by determining or detecting plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50811, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The mucleic acid sequences are reading frame of the novel polynucleotide. The mucleic acid sequences of the novel polynucleotide. The mucleic acid sequences in forensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations in forensics, and gene mapping, in the recombinant production of corticomes are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of corticomes are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of so useful for generating antisense DNA or RNA. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data corticom that production of cortained in electronic format directly from USPTO at sequence cortained in electronic format directly from USPTO at sequence cortained in electronic format directly from USPTO at sequence cortained sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                                         Human; ss; sequencing by hybridisation; SBH; expressed sequence tag; EST; genome mapping; biodiversity; genetic disorder.

The present sequence encodes a human transmembrane protein. The specification describes transmembrane proteins designated KIAA0880, 65h2 and 591. The proteins and polymuclochides can be used for screening assays, detection assays, e.g. chromosome mapping, tissue typing, forensic blology and predictive medicine, e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics. They polymucleoties an also be used for the recombinant production of 65h2 and 533 proteins, which can be used in assays to detect compounds which modulate their activity. These compounds are useful in the treatment of diseases characterized by aberrant activity or expression of protein which catalyse or facilitate transport of charged organic compound, e.g. prostaglandins and thromboxanes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, transmembrane protein, 65h2 protein, 593 protein, prostaglandin, thromboxane, KIAA0880 protein, ss.

The present sequence encodes a human transmembrane proteins designated 65h2. The specification also describes a transmembrane protein designated 593 and KIAA0880. The proteins and polynucleotides can be used for screening assays, detection assays, e.g. chromosome mapping, tissue typing, forensic biology and predictive medicine, e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomies. They polynucleotides can also be used for the recombinant production of 65h2 and 593 proteins, which can be used in assays to detect compounds which diseases characterized by aberrant activity or expression of protein which catalyse or facilitate transport of charged organic compound, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rice endosperm expression sequence label and genechip prepared from it.

                                          The invention describes a novel rice endosperm expression sequence label and the gene chip formed from it. The expression sequence babel technique is used to create a rice endosperm cDNA library. Non-redundant expression sequence labels are then combined and used to create a gene chip by microarray techniques. This sequence represents a rice endosperm expression sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the 613 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter specially inked to the mucleic acid mucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide whose expression is inhibited by the mutisense mucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid comprising any one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Zyskind JW;

the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation; (8) athway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts, (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene or which each of the strains is present in a culture or collection of product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the correling or organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target or prolatering discovery price assential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating call signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB77202). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a nucleic acid array, where each coordinate contains a single nucleic acid species having one of 770 nucleotide gequences (appearing as ABS76747-ABS77516) a of a Xenopus embryonic gene product, or its complement or hybidisable fragment of not less than 20 contaiguous nucleotides of one of those sequences. Also included are contacting differential expression of embryonic genes, comprising: (a) contacting a nucleic acid array comprising genes expressed in embryonic but not mature calls with nucleic acids from sample and control cells; and (b) detecting differential hybridisation of nucleic acids from the sample cells relative to the control cells; and detecting defects in development, comprising: (a) contacting nucleic acids from test cells undergoing development with a nucleic acid array of gene products known to play a fundamental role in the development process; and (b) detecting a difference in expression of a fundamental gene in the sample cells relative to a standard. The invention is useful to identify genes involved in embryonic development and related processes such as cell discreter and for identifying different types of embryonic cells. The present sequence is one of the 770 Xenopus embryonic cells. The

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
cativity, and can be used in gene therapy and vaccine production. (I)
cytoteins and polynuclectides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
cypression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
cyplument the patients own production of (I). Additionally, (I)
cypolynucleotides may be used to produce the secreted (I), by inserting the
nucleic acids into a host call and culturing the call to express the
cyctein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic derived cells. AAK64703
concerns and cancer human immune/haematopoietic antigen genomic
sequences from the present invention. AAK84992 to AAK84950 and AAM82169
crepresent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 30694; 3071pp + Sequence Listing; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                  Sequence 15, Application US/09446301A

Sequence 15, Application US/09446301A

Patent No. 650633

GENERAL INPORMATION:
APPLICANT: EL SOLH
TITLE OF INVENTION: POLYNUCLEOTIDES AND THEIR USE FOR DETECTING RESISTANCE
TITLE OF INVENTION: TO STREPTOGRAMIN A OR TO STREPTOGRAMIN B AND RELATED
TITLE OF INVENTION: COMPOUNDS

TITLE OF INVENTION: COMPOUNDS

TITLE OF INVENTION: COMPOUNDS

TITLE OF INVENTION: UNMBER: US/09/446,301A

CURRENT FILING DATE: 1999-112-20

NUMBER OF SEQ ID NOS: 51

SOFTWARE PATENTY

SEQ ID NO 15

LENGTH: 2411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GENERAL INFORMATION:

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
